

MOUNTING BRACKET DRILLING TEMPLATE FOR PRE-FILTER SYSTEM

Please measure and mark the available space on the wall before mounting the wall panel for the double pre-filter housing. Select the mounting space in such a way that the pre-filter system remains easily accessible for future maintenance work and filter replacements.

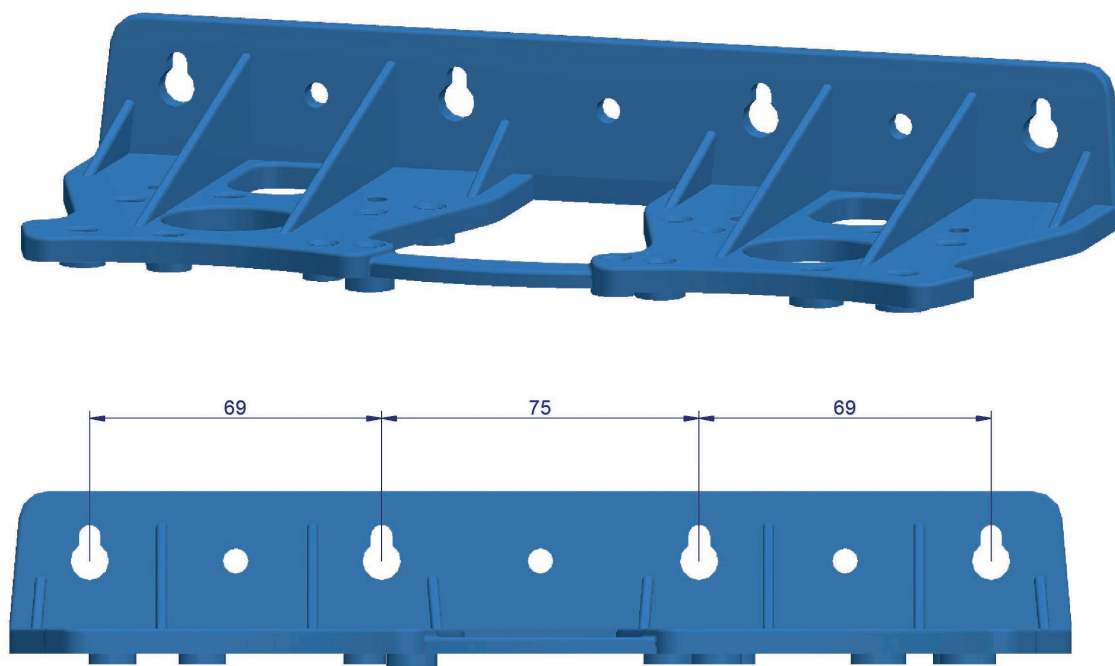

Use the drilling template to determine the distances of the required drill holes. The holes must have a diameter of 10 mm. Use the enclosed fastening elements (dowels and screws).

IMPORTANT

Please determine the carrying capacity of the wall or masonry and make sure the mounting bracket is installed carefully and correctly.
